MOWA Programming Language

Vijay Ram Giduturi - 1223292304
Srikruthi Vedantham - 1223040832
Nikhil Alapati - 1222336349
Phani Teja Inaganti - 1223458470
Krishna Chandra Sen Dadi - 1222678613

Language features

- MOWA is an imperative language.
- It supports arithmetic, unary, ternary, relational & logical operations. It accepts datatypes like integer, strings and boolean.
- Conditional statements and loops (along with for-range) can also be performed in this language.
- “show” is used as a print function in this language
- And few extra functionalities likes code comment, end of line (@) etc. can be used.

Tools

- **Python** is used to build lexer.
- **PySwip** library is used to interface python with prolog.
- Parser & Semantic Analysis (Evaluator) are designed with the help of SWI **Prolog**.
- For lexical analysis, **Sly** library of python is used.

Tools installation – For MacOS

- Install python3 on your machine and set environment variable called PATH.
  - brew install python3
- Install SWI-Prolog of version 8.2.10.
  - brew install swi-prolog
- Use python command to install pip, then use pip command to install the necessary libraries like PySwip, Sly.
  - pip3 install sly
  - pip3 install pyswip

Language Grammar

Data Types:

- Integers
- Strings
- Boolean

Operators:

- Arithmetic - *,/,+,- (represented by →)
- Unary - ++,--
- Relational - <,>,<=,>=,==,~=
- Logical - ^(and), |(or), ~(not)

Language Grammar

Looping Statements:

- For loop
- While loop
- For in range

Printing Statements:

- show()

Comments:

- Single line comment - #

Future Scope & Limitations

- Multiline comment - ## …. ##
- Extra Operators and data structures Implementations.
